

Technical Analysis Training Spring 2006

Course Details

The Technical Analyst is pleased to offer a range of exciting new training courses for institutional traders and investment managers. These one day courses are designed for more experienced professionals who wish to expand on their existing knowledge.

Spring 2006 Courses

Short Term Trading Techniques

This course will look exclusively at short term trading techniques covering recognized methods such as Bollinger Bands and Stochastics plus alternative techniques to keep you ahead of the crowd.

MARCH
01

Elliott Wave Theory

Turning Elliott Wave Theory into practice. An in-depth course on using Elliott Wave in actual trading including rule based entry and target techniques, and new approaches such as Tom Demark's D-Wave™.

MARCH
02

Market Cycles

A comprehensive assessment of established cycle theories including the recognized long term dominant cycles. This course will also cover more practical trading applications using measuring techniques such as the Fast Fourier Transform.

APRIL
04

Behavioural Finance & Market Psychology

People drive markets but how can we measure and tame human pressures? This session looks at current thinking and practical applications for traders with a focus on how to apply behavioural finance techniques to enhance trading returns across all markets..

APRIL
05

DeMark Indicators

This course looks at how DeMark indicators can be used to catch points of extreme exhaustion using the TD™ Sequential and TD™ Combo. Also included are new thoughts on trendline drawing and trading false breaks using TD™ Lines.

APRIL
06

Principal Trainer: Trevor Neil

Trevor Neil became a commodities trader at Merrill Lynch in the mid 1970's before going on to work at LIFFE giving technical analysis support to floor traders. In 2000 he became head of technical analysis at Bloomberg where he was responsible for training and technical analysis software development.
